

D04 geographic modulation of local weather response: convective

All observed paths

Within approximate joint-history support

Types are descriptive navigation groups. Frozen-model geographic component; finite lag bands; no causal or physical-unit interpretation.

Colors use a symmetric logarithmic scale; no cells are selected by significance. Support is an approximation, not exchangeability.

Numerically provisional: fits did not meet the registered gradient criterion; fitted-surface uncertainty is not estimated.

Net-change sensitivity (percentage points / common weather SD)
